DETAILED ACTION

Response to Amendment

1. The present Office action is made in response to the amendment filed on 7/31/06. It is noted that in the amendment, applicant has amended claims 6 and 11; canceled claims 8-10, 12, 21-22 and 24; and added claims 26-28. The pending claims 6-7, 11, 13, 25-27 and 28 are examined in this Office action. Note that claims 1-5, and 23 were canceled by applicant in the amendment of 11/25/05 and claims 14-20 were canceled by applicant in the amendment of 3/14/05.

Drawings

2. New corrected drawings for figures 3 and 7 in compliance with 37 CFR 1.121(d) are required in this application because applicant has not filed a replacement sheet for each sheets contained figures 3 and 7. Applicant should note that the sheets contained figures 3 and 7 filed on 9/23/04 are annotated sheets showing changes to the figures. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The rejections of claims 6-11, 13, 21-22 and 24 under 35 U.S.C. 103(a) over the cited art are overcome by the addition of features recited in claim 12 into the independent claim 6 as set forth in the amendment of 7/31/06.

Allowable Subject Matter

4. Claims 6-7, 11, 13, 25-27 and 28 are allowed.

5. The following is an examiner's statement of reasons for allowance:

A) The taking lens unit comprises a lens barrel supporting a plurality of lens elements and a flare stopper as recited in each of present claims 6 and 26 is patentable with respect to the prior art, in particular, the U.S. Patent Nos. 4,886,342; 5,568,322; 5,420,65 and 6,392,825 by the limitations related to the structure of the flare stopper and the lens which presses and deforms the flare stopper. In particular, while the use of a stop between two lens elements or between a lens and a spacer wherein the stop has an inner opening for allowing light passing therethrough is known to one skilled in the art as can be seen in each of the mentioned Patents; however, the prior art does not disclose a combination of lens elements and a flare stopper wherein the combination has the claimed feature thereof: "the flare stopper and one of the lens elements are arranged so that one of the lens elements presses and deforms said flare stopper so that said inner periphery is inclined with respect to said optical axis of said taking lens unit" as recited on last four lines of each claims 6 and 26.

B) The taking lens unit comprises a lens barrel supporting a plurality of lens elements and a flare stopper as recited in each of present claim 25 is patentable with respect to the prior art, in particular, the U.S. Patent Nos. 4,886,342; 5,568,322; 5,420,65 and 6,392,825 by the limitations related to the structure of the flare stopper and the lens which presses and deforms the flare stopper. In particular, while the use of a stop between two lens elements or between a lens and a spacer wherein the stop has
